# Don't make me click:

#1 Mistake: Less spacing and the hamburger menu is better when located at the right side.
Image:

Proposed resolution: It's much better if the menu button is on the right side of the Nav bar and the Brand logo should have a space between the navigation link.

Principle: UX should be effective, satisfying, and appealing.

#2 Mistake: Rename fetch to search and transfer it to the right side.
Image:

Proposed resolution:
Changing the Fetch to Search is much more appealing.

Principle: UX must be clear, simple, and effortless.

#3 Mistake: remove unnecessary icon/button.
Image:

Proposed resolution:
Use AJAX instead to automatically submit every form change.
Principle: UX must be user-focused, detailed-oriented, and useful.

#4 Mistake: No required field and label, the layout is very bad, the font size needs to be improved. Unnecessary icons for edit title. Needs to add course for the publish to be visible.

Image:

Proposed resolution: Add label and also the required field, remove unnecessary icons. Improve layout. Fix the font size so the CTA can be emphasized. Publish or unpublish course should be initially visible when adding a new course instead of clicking the add course.

Principle: UX should be less clicks/keyboard strokes in navigating.
