Hand Eye Coordination:

#1 Mistake: You can add an event like hover to show the dropdown instead of clicking for it to show.
Image:

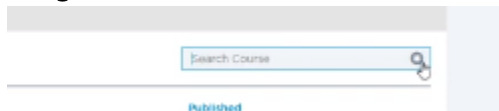

Proposed resolution:
Simply add a howver event for dropdowns.

#2 Mistake: user needs to click to search.
Image:

Proposed resolution:
Add an event onchange on the input so that everytime the user clicks, it automatically submits in real-time

#3 Mistake: Too much spacing/padding in x axis and almost all text has the same font size. Every detail was compressed

Proposed resolution: Apply the best practice for spacing and typography like adjusting font sizes. The gap of the sidebar and the main content is huge. Avoid compressing all the details in one place and apply proper whitespace for the main content.
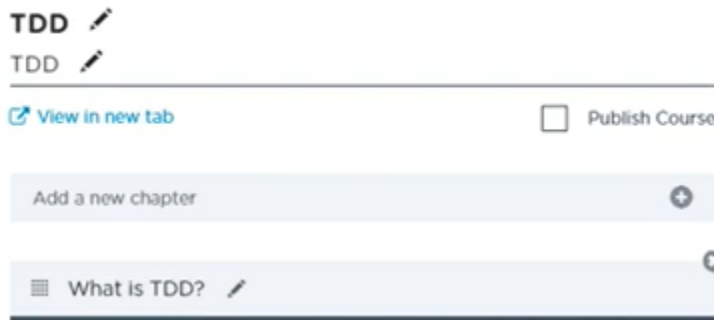

#4 Mistake: The delete icon.
Image:

Proposed resolution. Add a trash Icon in that row instead of placing it between two rows.

#5 Mistake: Too much pen icon
image:

Proposed resolution: It should be better it the pen icon can only be shown when hovered.

#6 Mistake: compressed Published courses
Image:

Proposed resolution: You can place it in a card and add a short description of the course instead of displaying it row by row.
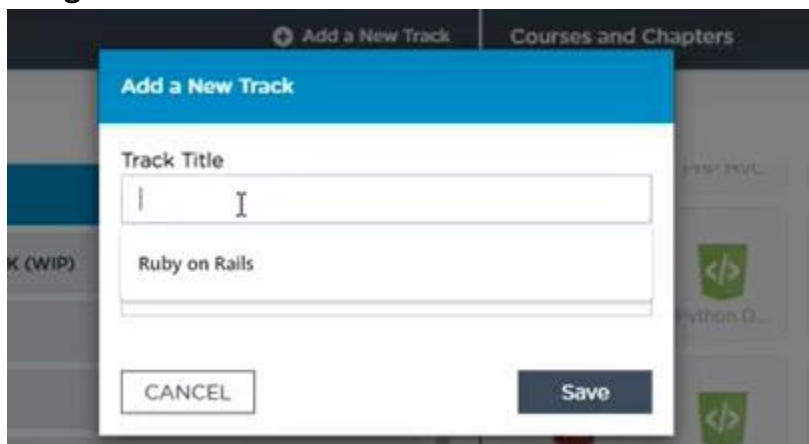

#7 Mistake: No categories.

Image:

Proposed resolution: You can add a category in the sidebar displaying tracks, courses and chapters in a separate view file instead of compressing it into one views.

#8 Mistake: Needs to click the input and it has no placeholder.
Image:

Proposed resolution: Add a placeholder and if the user clicks add a new track, the input should be automatically selected so they can type immediately.

#9 Mistake: No date of upload and the user needs to scroll to view what they have upload.
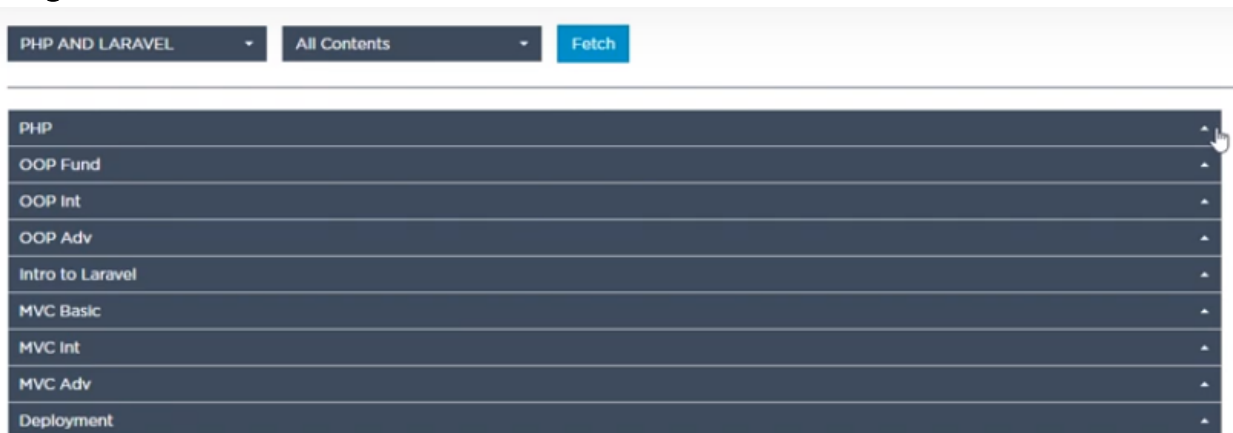

Image:

Proposed resolution: The tracks should have a date of upload or it should be displayed in a descending order with the latest track upload should be shown first.

#10 Mistake: Too many dropdowns in 1 view.

Image:

Proposed resolution: The courses should be categorized in the sidebar so that the user can click on it in the sidebar displaying a separate view-file/list in every course.
